LIGHT WEIGHT HY-RAIL[®] EQUIPMENT - MANUALLY OPERATED SERIES 0306

FOR STATION WAGONS, SEDANS AND PICKUP TRUCKS UP TO 6000 GVW

Travel Road or Rail -- Efficiently -- Safely

Fairmont Hy-Rail equipment enables a vehicle to operate either on the highway or on rail, whichever is most advantageous. This Light Weight Series 0306 has load bearing, rubber tread guide wheels with independent action through a rubber cushion torque unit. Guide wheels are raised and lowered manually, and are held by a mechanical lock that is secured by a safety pin.

The Series 0306 is for sedans, station wagons, and pickup trucks where the gross vehicle weight (GVW) does not exceed 6000 lbs. Also, the tread of the pneumatic wheels should be suitable for or can be altered to meet on-track needs, and the frame within specific limits. Certain other requirements are made a part of the vehicle specifications to insure a safe unit of long life.

Lowest weight with safety is accomplished by using heat treated aluminum alloys wherever practical. Weight of one end assembly with mounting plates is 234 lbs. for the average passenger vehicle.
