Subject: TUNE-UP PROCEEDURE (EQUIPMENT)

Description: MODEL A-8

We strongly recommend that all eight of the following shop equipment items be incorporated in any tune-up program. It would be possible for a fleet operator to start with the first five items, and then purchase, one at a time, the additional three.

1. Timing Light
2. Feeler Gauges (A wire gauge for plugs and a feeler gauge for points.)
3. Fuel Pump pressure gauge.
4. Vacuum Gauge.
5. Battery Hydrometer

In addition to these five instruments, we strongly recommend the use of the following two instruments:

6. Exhaust Gas Analyzer.
7. Electric Tachometer

One additional instrument would be desirable in that it would avoid unnecessarily removing distributors:

8. Cam Angle Meter
